ANGACOM

WHERE BROADBAND MEETS CONTENT

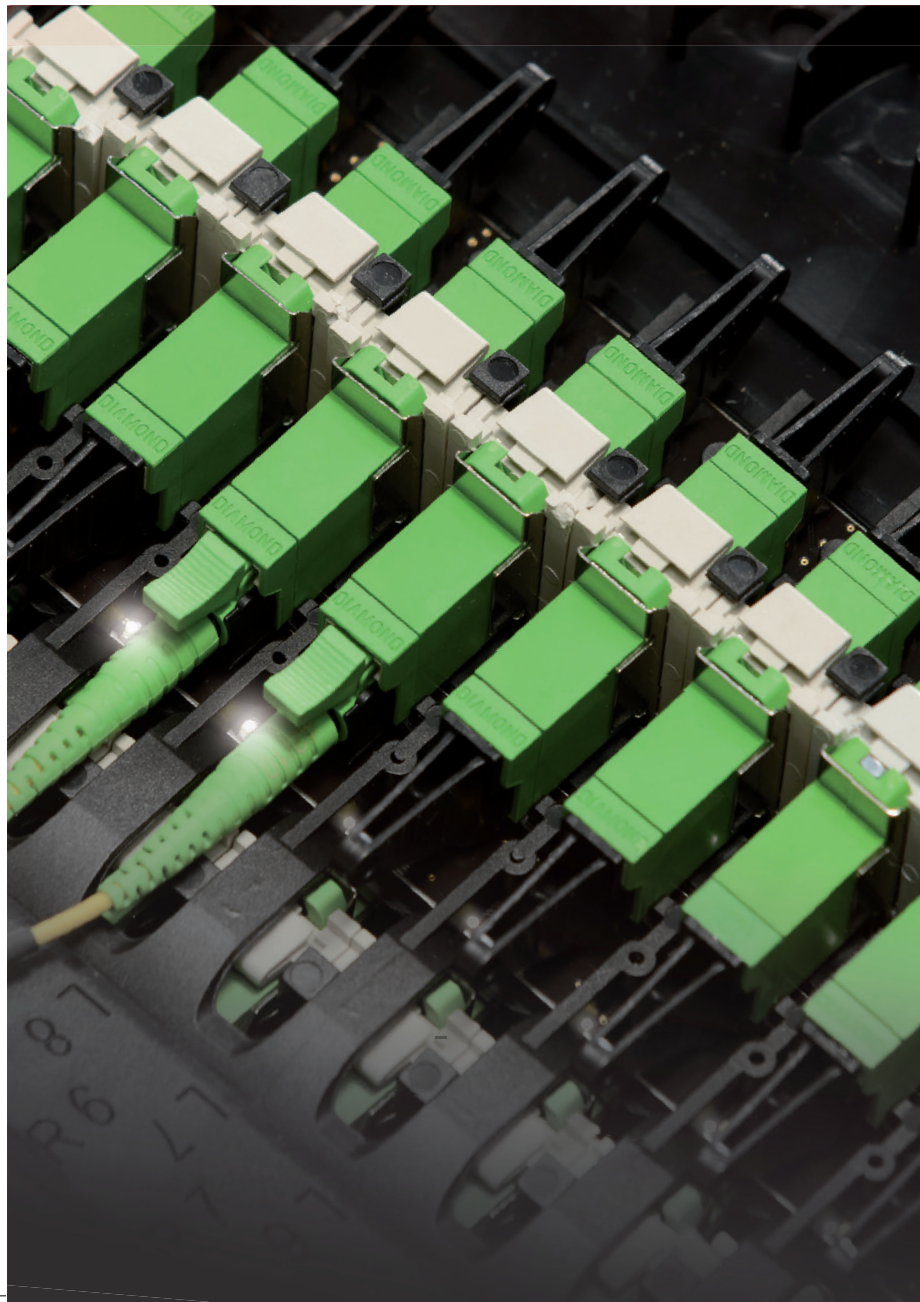

E2K

Complete range of high quality products. Simplex, duplex adapters and connectors only in Grade B with metal shutters and laser labeling. With color and mechanical coding. According IEC 61754-15 standard and fully compatible with usual E2000 products. Measured values traceability. Tool support for assemblers. Eco-friendly packaging.

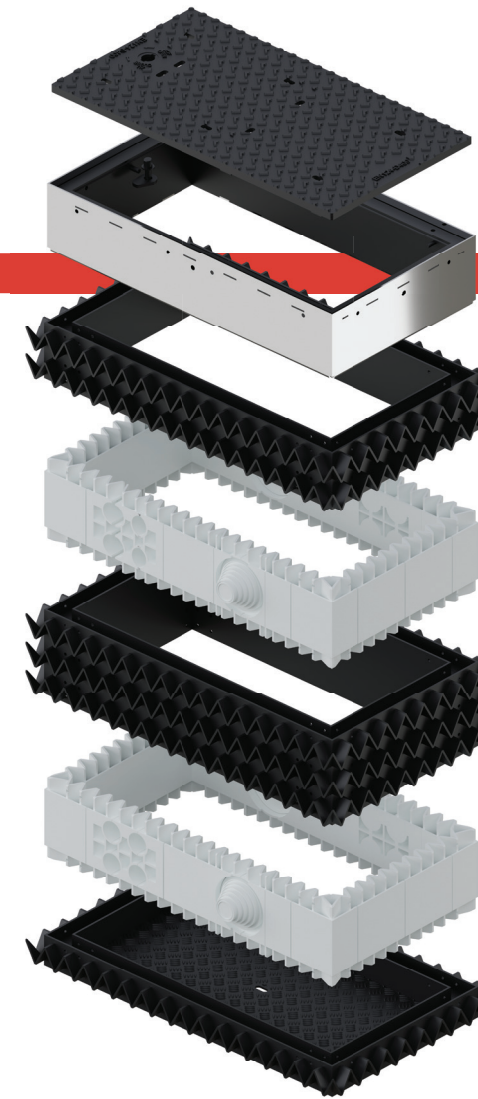

ONT KIT

Configure product for your FTTH project. Select your wall box, quantity of fibers, adapters, cable construction and length. Also both side termination possible. Adapters with dust and laser protection as standard. Mounting plate and DIN rail installation possible. Installation ready also for end user installation. Robust packaging with tuned roll-out mechanism. Video installation guidance. OEM solution with individual branding of product and installation video.

PATCH ASSIST

PatchAssist is able to identify patch field allocations in real time. This is essential in order to document network and cable structures comprehensively and failure-free. RFID technology constitutes the core of the system. Each connector is fitted with an RFID tag bearing a unique number which allows to identify each patch cable and its position in a patch field. Each port has its own tag reader which detects plugged connections immediately and signals the unique cable identification number of the identified connector to the system server.

MODULARE MANHOLE

A unique design of manhole with double wall sandwich construction with block building system for high modularity of entry ports. Configuration of entry ports can be easily modified during installation according to real situation on the spot. Unique design allows installation over existing lines and nonstandard tube diameters. Height adjustment possible in 75mm steps. Two-piece iron cast cover for easier manipulation. Including cover height adjustment possibility.
